# Easy-use, fast and efficient !

## ACQUISITION

Version A **AKI**VISION software enables to **configure** all transmitters and modules of your installation, and **to record and display measurements in real time.**

### 1 **Configuration** of instruments & modules

The software **automatically** searchs for all instruments from the network (slaves) and displays them.

It is then possible to proceed to all **settings** :

- **channels** and **units**
- analogue **outputs**
- **alarms** and **relays**
- **measuring** functions
- **modules**

### 2 **Users** acces management

**Password secured** acces!

### 3 **Configuration** of acquisition

- Set up of **measuring intervals.**
- Set up of **software alarms**, and calculated channels.

### 4 **Display of** acquisition

**Graphic display accurate and clear!**
Allows to monitor measurements on the whole network thanks to graphic display and to consult statistics.

**Visual!**
**Alarms are displayed in lines** to make them more visible.

*2 modes of display in real time!*

**Synoptic display user-friendly!**
Alarms, instruments and measurements can be displayed directly from a drawing or a picture of installation.
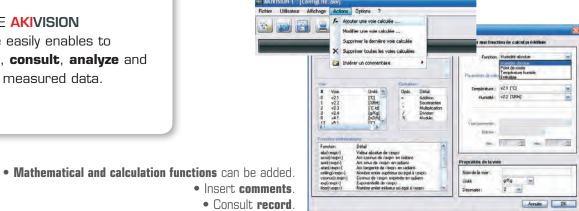

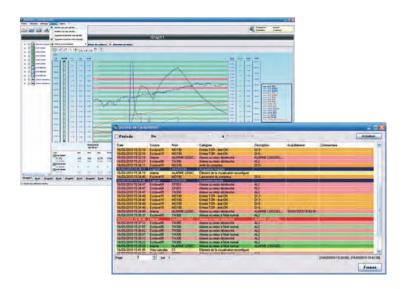

**Practical!**
**Configuration** of instruments can be done by clicking on their representation.

## PROCESSING

Version E **AKI**VISION software easily enables to **process**, **consult**, **analyze** and **print** all measured data.

### 5 **Data processing** & exportation

- **Mathematical and calculation functions** can be added.
- Insert **comments**.
- Consult **record**.

### 6 **Remote lookup** & display of your records

Make your own **graphic presentations** or **statistics**.
